N. 1 1 Maggio 1985

pag.

- 1 E. R. CAIANIELLO and W. GUZ - The Dirak-like equation in phase space as a phenomenological model for families of spin- $\frac{1}{2}$ baryons.
- 9 N. FLEURY, J. LEITE LOPES and J. A. MARTINS SIMÕES - New weak-boson decays and possible spin- $\frac{3}{2}$ leptons.
- 14 A. BONASERA - A critical interaction time for fast fission.
- 19 D. NERI and J. CHAHOUD - On an intrinsic quantal nature of statistical thermodynamics.
- 23 G. KARAYANNIS - Lie-isotopic structure of the propagation of the damped electromagnetic waves.
- 26 M. T. TELI - Six-dimensional unified field theory.
- 31 G. GIAQUINTA, R. FAZIO and C. DI MAURO - On the self-consistent equation for the vortex pair unbinding temperature in 2D superconductors.
- 39 R. CENNI, F. CONTE and G. DILLON - Nuclear binding energy and pion dynamics.
- 45 T. M. ATANACKOVIĆ - Variational principle and error bounds for a problem in combustion theory.
- 49 M. H. MACGREGOR - Generalization of the postulate of special relativity.
- 55 B. BASU and P. BANDYOPADHYAY - Quantum solitons in a linear chain.
- 61 P. GRAVEL et C. GAUTHIER - Les théories unitaires pentadimensionnelles et le postulat d'homogénéité spatiale.

N. 2 16 Maggio 1985

pag.

- 65 A. LAMI and G. VILLANI - Proton tunnelling in a strong electromagnetic field at low frequency: a simple model for the weak-temperature limit.
- 69 V. BUONOMANO - The number of photon counting measurements, the visibility and the intensity.
- 76 R. BALBINOT - Crossing the Einstein-Rosen bridge.
- 81 A. PALUMBO - A phenomenological relativistic theory of thermoelasticity.
- 92 A. PALUMBO - On the relativistic thermodynamics of Maxwell bodies.
- 97 Y. KOIDE - Vertical preons, horizontal preons and others.
- 103 J. SEKE - Exact solution of the single-atom spontaneous emission in a resonant cavity.
- 108 O. KUNSTMANN and I. SAAVEDRA - Basic mass quantum for relativistic spin- $\frac{1}{2}$ particles.

N. 3 1 Giugno 1985

pag.

- 113 S. BERGIA, F. CANNATA, B. GIORGINI and V. ZAMBONI - A solvable model for irreversible quantum phenomena.
- 119 K. YANAGI - A new formulation of relative entropy and quantum measurements.

pag.	
123	L. MASPERI and F. D. MAZZITELLI – Bound states between protons and magnetic poles: influence on the Rubakov effect.
127	R. JONES – Plasma confinement in squared tori.
131	A. SCALIA – The nucleus-nucleus potential obtained in the framework of the critical-distance approaches by using the «elastic» model for heavy-ion fusion.
135	P. QUARATI, M. GUIDETTI and P. P. DELSANTO – Sum rule approach to the isospin symmetry breaking in ^4He .
140	J. HAJJ-BOUTROS and B. LEAUTE – Solutions of Einstein's field equations with plane symmetry.
145	G. FONTE, L. LUCARONI and G. SCHIFFRER – An application of the gradient method to anharmonic oscillators.
150	E. COMAY – Will magnetic monopoles be detected in our instruments?
153	J. A. FERRARI – Scalar gravitation and gyroscope's precession.
155	P. MORETTI – A note on the Mössbauer line shape calculation.
160	M. BANAI and B. LUKÁCS – An unconventional canonical quantization of local field theories (Erratum).

N. 4 16 Giugno 1985

pag.	
161	A. S. DE CASTRO, H. F. DE CARVALHO and A. B. D'OLIVEIRA – Hadronic spectroscopy: light and heavy mesons.
169	A. UGUZZONI – A scaling law in diffusion models for blocking.
176	G. DATTOLI, A. DIPACE, G. FORNETTI and E. SABIA – Differential-difference equations of the Raman-Nath type and Schrödinger-like equations with a time-dependent harmonic potential: exact solutions.
181	C. AGNES, C. BUZANO, G. D'ARIANO and M. RASETTI – A solvable model for a system of Coulomb particles in $\mathbf{R}^2$ with homotopically nontrivial phase space.
188	R. CENNI, G. DILLON and P. SARACCO – A note on the functional approach to the effective interaction in the nuclear many-body problem.
195	A. BACH, H. BLANK and H. FRANCKE – Bose-Einstein statistics derived from the statistics of classical particles.
199	B. RAM – Klein paradox of the second kind.
203	E. ARIMONDO and F. FONTANA – Analysis of atomic-beam spread induced by a resonant standing-wave laser.

N. 5 1 Luglio 1985

pag.	
209	T. W. CHIU – Anomalous magnetic moment of a relativistic bound-state fermion.
216	J. DEY and P. GHOSE – Consistency of QCD sum rules and predictions for $g_{\pi N N}$, f_π and m_π .
219	R. GUNAWANT and B. S. RAJPUT – Tachyonic dyons in six-dimensional space.
223	F. ABBATTISTA, D. MAZZA, M. VALLINO, A. DELUNAS and V. MAXIA – Magnetic ordering in layered $\text{SrO} \cdot \text{LaFeO}_3$ perovskitic lattice.
228	C. MASSA – Comment on «upper bound on entropy».
229	J. Van DER JEUGT – The 2-boson Fock space as a realization of $SU_{2,1}$.

- 233 J. CHELA-FLORES - Quark distribution distortion in heavy nuclei.
 237 A. PLANQUES-MESTRE and R. TARRACH - Electrons in a heated vacuum.
 244 T. HOFSSÄSS and H. KLEINERT - Disorder field theory of the ensemble of random loops without spikes.
 249 H. SAKUYAMA and K. WATANABE - Events with large missing transverse momentum in the CERN $p\bar{p}$ colliders.

N. 6 16 Luglio 1985

pag.

- 257 E. B. MANOUKIAN - Dynamical generation of the time-dependent Poisson distribution for particle production.
 261 H. KLEINERT - Interaction energy between defects in higher-gradient elasticity.
 267 E. RECAMI and E. GIANNETTO - Tachyon mechanics and tachyon gravitational interaction.
 274 M. DERSARKISSIAN - New consequences of cosmic quantum mechanics.
 277 J. Q. LIANG - Broken symmetry in multiply-connected two-dimensional spaces in the presence of long-range magnetic flux and the multiple-valued wave function.
 282 J. G. WILLIAMS - Topological spin and $(n + p)$ -dimensional manifolds.
 285 G. CAVALLERI - Schrödinger's equation as a consequence of zitterbewegung.
 292 M. NOVELLO and LIGIA M. C. S. RODRIGUES - A unified model for gravity and electroweak interactions.
 297 G. PISENT and L. CANTON - Scattering matrix, Fredholm matrix and Jost matrix in a multichannel scattering process by a finite-rank potential.
 302 K. GAVROGLU - The $\Delta S = 1$ $B \rightarrow B'_{\gamma\gamma}$ decays.

N. 7 1 Agosto 1985

pag.

- 305 F. IAZZI, B. MINETTI, T. BRESSANI, E. CHIAVASSA, S. COSTA, G. DELLACASA, M. GALLIO, A. MUSSO, G. PUDDU and S. SERCI - Search for subthreshold K^+ production by ^3He ions of 910 MeV on carbon.
 309 A. JANNUSSIS - Some remarks on quantum thermodynamics.
 314 A. JANNUSSIS and K. TSOULIAS - Some remarks on quantum-statistical mechanics with common time.
 319 L. FERRARI and G. RUSSO - A pseudo-phase-transition in a one-dimensional chain.
 324 V. V. ANTIPOV, L. P. CHERNENKO, A. G. GALPERIN, O. A. KROPINA, L. K. LYTKIN, V. A. MOISEENKO, V. A. PETROV, I. L. PISAREV, A. A. TYAPKIN, I. N. VASILEVSKY, V. V. SISHNIAKOV and O. A. ZAIMIDOROGA - Study of backward-produced protons in π^- -nucleus interactions at 40 GeV/c.
 329 P. C. W. FUNG and WAI BONG YEUNG - A fast algorithm for the perturbative calculation of the ground-state energy of the quantum-mechanical anharmonic oscillator.
 333 R. BERGAMINI and G. VENTURI - The effect of higher dimensions on relativistic cosmology.
 340 A. AIROLDI, A. OREFICE and G. RAMPONI - Effect of refraction on power deposition profiles during electron cyclotron wave injection in a toroidal fusion plasma.

N. 8 16 Agosto 1985

pag.

- 345 A. ASPECT and P. GRANGIER - About resonant scattering and other hypothetical effects in the Orsay atomic-cascade experiment tests of Bell inequalities: a discussion and some new experimental data.
- 349 P. KAMMEL - Thermalization effects in muon-catalyzed fusion in low-density deuterium-tritium gas.
- 355 R. MIGNANI - Lie-isotopic algebraic approach to formal nonpotential scattering theory.
- 363 M. ROMEO - Ionization equilibrium in a two-temperature plasma.
- 369 R. JONES - Magnetoreaction confinement of plasmas.
- 373 Y. E. KIM - Anomalous short mean free path from relativistic heavy-ion collisions with ^{12}C at 4.2 A GeV/c.
- 378 M. P. SILVERMAN - Specular light scattering from a chiral medium: unambiguous test of gyrotropic constitutive relations.
- 383 A. BACH - On the quantum properties of indistinguishable classical particles.
- 388 E. A. B. COLE and I. M. STARR - Six-dimensional relativity: physical appearance of a particle whose time path changes.
